Socure's Digital Intelligence Suite

Gain real-time insights into user devices, behavior, and historical entity profile observations

Socure's Digital Intelligence Suite brings together cutting-edge solutions to protect your business from sophisticated fraud attacks by combining device intelligence, behavioral analytics, and an entity profiler that provides an online digital footprint of user activity across our network of over 160 deployments.

Powerful API
Access online session data in real-time to get all or any of the data you need to make an informed decision

Device intelligence
Gain real-time device intelligence data to understand the device, its connection and location before you approve transactions

Behavioral analytics
See how users behave as they go through the user journey and gain signals to help assess risk for each session

Entity profiler
A future forward approach to work alongside new privacy changes in web and mobile by using our inverse PII to Device graph

Web and mobile
Deploys to all of your online assets for full coverage of your digital channels

---

Get session insights
in under 200ms

Detect risky connections
Spot VPNs, Proxies, TOR exits

Identify risky devices
Detect emulators, virtual machines, and automated scripts

Get device insights
Understand device language, time zones, and other user settings

Understand user behavior
Get session level details on user interactions and timings

Compare digital footprint
See historical observations based on PII even when device IDs are missing

Easy integrations
Deploy to Web and Mobile apps with just a few lines of code

Use case agnostic data

Digital Intelligence data can be applied across a variety of use cases as a source of data enrichment. Use the features to gain insights and additional assurance at critical junctures in the user journey.
